SIMMENTAL & LUCKY CROSS®

MONDAY, FEBRUARY 5, 2024 || NOON, MST || AT THE RANCH NEAR LEWISTOWN, MONTANA

GATEWAY *Breeding Value* BULL SALE

44th ANNUAL *Bull Sale*

Welcome to the Sale

Welcome from Gateway Simmental and beautiful Central Montana. It has been a much better year for cattlemen in this area this year. However, high priced feed, too much straw fed last winter and grass hoppers this summer sure made it challenging for some.

Providing sound, functional cattle along with great genetics is what Gateway is all about.

Our main focus is to make our customer's cattle better. The little things matter and we feel it is our job to provide growthy cattle that improve traits that may not be visible. We are committed to making sure our genetics provide convenience, heterosis and uniformity.

Diversity and product differentiation are also a focus of the Gateway program. In genetics, heterosis from diversity is the only thing free. The most powerful heterosis is achieved with maternal heterosis through the females.

If we all as breeders use same bulls on a regular basis, diversity is lost. This is why Gateway likes to utilize different sires that add diversity.

Progeny testing our young sires early for performance and carcass traits is very important to us. We really want to know what our sires are capable of. Although we sell our cattle by the pound, the better we as breeders do at lacing our sires with feedlot performance, carcass quality and maternal qualities, the more apt the buyers of your calves will seek them out on a regular basis.

We are selling a few fall bred cows at the end of the sale this year. On page 54 you will see a list of registration numbers for the potential sale cows. They will all be bred to GW High Ball 102H. A supplement sheet will be added with pedigrees and breeding dates as it becomes available.

We will post a supplement sheet later this month with the yearling performance and scrotal measurements.

As always, thanks for your continued interest in our program and hope to see you at the sale on February 5th.

Sincerely,
Jim and Tom Butcher

GATEWAY CAN HELP WITH YOUR FEEDER CALF SALES.

Are you happy with your feeder calf marketing program? If you are, stay with what you are doing. If not, we have options. Logan Butcher has been marketing cattle on Superior Livestock for eleven years now and we are confident he can do good job of representing your cattle. His partnership with Allied Feeding Partners and the Clint Berry Marketing Group allows us to have nationwide service for feeder calf and bred-stock marketing. In 2023, they marketed nearly 30,000 head, many times topping the market on the big Superior summer sales. They have found that there is a significant market for Gateway sired replacement heifers in addition to the already huge demand for cross-bred feeder cattle. Both Logan, Clint and the rest of the rep team are improving their contact list each year. Logan 406-350-1417. Clint 417-844-1009.

Improved Buying Confidence with Greater Genomic **ASSURANCE**

Access to more and better information has always been key to making wise decisions. The evolution and improvement of genetic evaluation tools too has given us an ever-clearer picture of the true genetic makeup of cattle and thus a better view of the value proposition. RightMate, powered by Top Genomics LLC is taking the evaluation of genetics and genomics one giant step further. By combining specific genomic information with the long-proven value of EPDs, this new advancement in technology improves our depth and precision when evaluating the actual ability to transmit value and profit.

The 3 Accreditation Logos below are designed to simplify bull selection and improve buyer confidence by more accurately describing the genetics offered and by reducing risk. What this means to you as a customer is a much greater assurance that you are getting both what you want and need from the genetics you purchase. What it means to your seedstock provider is access to RightMate technology that simply sets them apart from the rest of the industry.

ACCREDITED GENOMIC PLUS – For the majority of producers who simply need consistent and balanced genetic improvement, without genomic setbacks, G+ Accredited bulls should be on your list for premium purchase. These sires will absolutely move you forward for both cost reduction and income producing traits and substantially reduce risk when compared to all other evaluation programs. It's simple, the right genes are in these bulls to help secure a profitable future and they have great EPDs to match!

ACCREDITED CALVING EASE – Simply find bulls with the ACE logo for third party Accredited, secure Calving Ease bulls. Though we have had tools in the past to assist in choosing heifer bulls, we've never had one nearly this effective. The reduced risk that comes with this genomic certification will simply make your decisions easier and your heifer calving season more successful. Purchase special purpose ACE bulls with confidence. They will deliver consistent and predictable calving ease.

ACCREDITED TERMINAL MATE – Just like an ATM machine makes it simpler to access your cash, the ATM Logo highlights bulls accredited to generate extra cash income as soon as your next calf crop! These bulls are meant specifically to use only on mature cows and for the purpose of adding performance, pay weight and end product value to market.

Catalog Codes

BB	=	Homozygous Black	PB	=	Purebred
HB	=	Heterozygous Black	SM	=	Simmental
DB	=	Double Black	AN	=	Angus
NDR	=	Non-Diluter Red	AR	=	Red Angus
PP	=	Homozygous Polled			
HP	=	Heterozygous Polled	DDF	=	Developmental Duplication Free

P/S	=	Polled/Scurred			

Quick Calving Ease Guide

Gateway calving star system - Finding heifer bulls made easy.

****	Very suitable for heifer matings
***	Suitable for heifers and very suitable for young cows
**	Suitable for young cows, very suitable for older cows
*	Suitable for cows

Note to our Buyers

There are black bulls that are part Red Angus that don't carry the red gene. Make sure you look at the BB, HB notation on the top line. Then you know if the animals with some Red Angus breed composition carry a red gene. This is how Gateway is adding diversity and broadening the genetic base of our Lucky Cross cattle.

DEICHMANN LIVESTOCK BROKERAGE

Dan & Marilyn Deichmann

Increased value per head! That's been our commitment and will continue to be each time we write a contract to a Gateway customer for yearlings or calves. Markets and marketing conditions change but the high quality calves and yearlings that cattle feeders are looking for doesn't. It takes years to establish a high reputation program, and this is what the Butchers have done. Our cliental expect a premium product delivered to them and every time we send out Gateway Lucky Cross feeders, they get just that. We have a consistent clientele that ask for the Lucky Cross feeders.

If you are new to the Gateway-Lucky Cross program, please take time to walk through the bullpens and study the results of this proven program. For you that are repeat customers, count on seeing the same predictable genetic base, and high quality performance and kind you have come to expect at Gateway over the years. Our phone is always on. Feel free to call us about contracting, about the markets, and especially to visit about the bulls.

We look forward to seeing you at the sale!

Sincerely,

Dan and Marilyn Deichmann

CUTTING EDGE GENOMIC TECHNOLOGY

RightChoice and RightMate Powered by Top Genomics - Better, Stronger, Faster

Genetic providers have used strong genetic prediction tools like EPDs for making, then offering customers consistent genetic progress for a long time. Improved EPDs, bolstered by the inclusion of genomic evaluation have made the potential for more profitable cattle and better beef even greater in the past few years. Now there are RightMate and RightChoice. These improved technologies combine advanced knowledge of high impact genomics with the database proven power of EPDs. The results, are proving to be greatly accelerated genetic improvement capability with the added benefit of profit enhancing uniformity. Maybe the best news for customers is that despite the sophistication of the technology, these tools are simple to use. With both great power and needed simplicity RightMate and RightChoice are poised to change the way we both improve and market genetics.

For breeders and those wishing to get the most from every mating, RightMate is the most impactful and powerful option. Take the guesswork out of progress by using genomically prescribed matings and just as importantly avoid those with a low probability of success. The technology is ready and the validation is strong. Simply define the direction of your breeding objectives, even female by female and RightMate will help you get there faster than any tool used in the past. We've all known for a long time that certain cows just need to be mated to certain bulls. RightMate helps take the guesswork and the trial and error out. Finding the right mating, the first time makes all of the difference.

Better matings result in more improvement and more potential profit for commercial customers too. That should be the goal of every seedstock provider. Commercial customers however, need to be able to source genetics that fit their production systems and goals quickly and easily. That is where RightChoice comes in. With 20 or more EPD categories, overwhelming amounts of raw data and multiple index offerings to evaluate in a short time, the potential to use selection information to its best result has been possible, but difficult for commercial producers. RightChoice is designed as a simple to use sorting tool for selection of new sires or females all based on commercial genetic needs and production goals. The sophisticated technology is on the inside of RightChoice with easy to use Logos for sorting as the published and effective result. All you need to do is evaluate and pick the bulls you like from the group with the RightMate genetic logo that fits your needs.

RightChoice technology will not only push value and profit traits forward. Because of the way it sorts sires, it can reduce variation and inconsistency in your calf crop as well. For example, with ACE logo bulls, not only can you expect reduced dystocia, but the birth weights responsible for most of the challenges will be less variable. That means more calves born close to the average for weight and far fewer extreme calves that either create issues for your heifers or are unreasonably small. With smart RightMate selections, uniformity of calf crop continues to marketing and even replacement females, creating more profit all the way through. We can't always control the genes present in the cow herd, but we can make sure your seedstock purchase will help you get the most progress moving forward.

RightMate and RightChoice . . . Better, Stronger, Faster.

HOW TO PARTICIPATE AS AN ABSENTEE BUYER

We have made preparations to bid and buy livestock through Superior Productions' "Call or Click-To-Bid" service for those unable to attend in person on sale day. Please note that all of the lots in the sale will also be available for viewing online prior to sale day at www.superiorlivestock.com.

HERE'S HOW IT WORKS

Turn in Bids Over the Phone. This is our traditional method of buying livestock and is the suggested process for anyone who does not have consistent, high-speed internet. To get started simply go online to www.superiorlivestock.com and click on the tab titled "Register for a Buyer Number". Select the registration form for Superior Productions and print the registration form. Fill it out and fax it in to Superior Productions at (817) 378-3380 with a signature on it. You can also mail it in to the address provided on the form. Upon receipt of this information Superior will call you with a buyer's number and the bid line phone number that you will use on sale day to place bids over the phone.

CLICK-TO-BID

This is Superior's online bidding program for cattle buying. Please note that high speed internet is required – this is not for dial-up or satellite internet. Registration is free, but you must become a member of www.superiorclicktobid.com to sign up. Becoming a member is easy – just go to the homepage of www.superiorclicktobid.com and follow the out-lined steps to get started. Input your information and select a username and password. You will receive an e-mail confirming you are a member. From that point forward you just have to sign in and select the sale you would like to register for and once approved by the ranch you will receive an e-mail confirming which sale you are now registered for.

VIEWING THE AUCTION

The sale will be broadcast live in Hi-Definition on the internet at both www.superiorlivestock.com and www.superiorclicktobid.com. The video feed on the homepage of www.superiorlivestock.com looks the same as the video feed on TV and can be watched over a smartphone or tablet. Remember you can call in to bid whether watching on the TV or on the internet, but you must be a member of www.superiorclicktobid.com to "click-to-bid".

Bidders who are successful in making purchases via satellite or internet will be contacted by the ranch after the sale to settle payment and make shipping arrangements.

Please Join Us... for our Open House

We would like to invite you to our 14th Annual Customer Appreciation Dinner and Program on Tuesday, January 23.

The Gateway crew invites you to stop by the ranch and preview the bulls in the afternoon. We will all be available to visit and answer any questions you may have.

At 5:00 PM or so, we will meet at the Eagles Club on Main Street for a cocktail hour, followed by supper at 6:00 PM.

Educational program will feature the following:

Marty Ropp, Allied Genetic Resources
Andy Kellem, Judith Basin Cattle Feeders

If you could RSVP ahead of time, it would help us planning supper: Call or email Jim Butcher 406-350-0467 or jimbutcher58@gmail.com

432L is a maternal brother to our GW Sparky bull. It seems silly to sell this bull, but we are willing to do so. We intend to sample him, and will retain 25% semen interest in order to protect ourselves if we decide to breed a large volume of commercial heifers to him. He looks good, is basically a growthier version of Sparky. The predictability of docility is instilled in his genetics.

ASA Quick Reference to EPDs, Indexes and \$Values

EXPECTED PROGENY DIFFERENCES (EPDs): EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing in what units they are expressed. For example, if the above case referred to weaning weight EPDs, sire A would be expected to sire 15 pounds more weaning weight than sire B. If calving ease was the trait, sire A would be expected to sire 15 percent more unassisted births in first-calf heifers; in other words, if sire B sired 30 assists in a group of 100 heifers, we would expect sire A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For more detailed information about EPDs and \$ indexes, visit www.simmental.org.

Listed below are the units in which ASA EPDs are expressed:

- ALL-PURPOSE INDEX (API):** Dollars per cow exposed under an all-purpose-sire scenario.
- BACK FAT (BF):** Inches of carcass backfat at 475 days.
- BIRTH WEIGHT (BW):** Pounds of birth weight.
- CALVING EASE (CE):** Percent of unassisted births when used on heifers.
- CARCASS WEIGHT (CW):** Pounds of carcass weight at 475 days.
- DOCILITY (DOC):** Percent of offspring receiving a disposition score of 1 (docile).
- MATERNAL CALVING EASE (MCE):** Percent of unassisted births in first-calving daughters.
- MILK (MLK):** Pounds of weaning weight due to milk.
- MARBLING (MARB):** Carcass marbling score at 475 days.
- MATERNAL WEANING WEIGHT (MWW):** Pounds of weaning weight due to milk and growth.
- RIBEYE AREA (REA):** Square inches of carcass ribeye at 475 days.
- TERMINAL INDEX (TI):** Dollars per cow exposed under a terminal-sire scenario.
- WEANING WEIGHT (WW):** Pounds of weaning weight.
- YEARLING WEIGHT (YW):** Pounds of yearling weight.

YIELD GRADE (YG): Carcass yield grade score at 475 days.

\$ INDEXES: Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide pieces of the economic puzzle. This is where \$ indexes come in. Through well-conceived, rigorous mathematical computation, \$ indexes blend EPDs and economics to estimate an animal's overall impact on integrated commercial production. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

- ALL-PURPOSE INDEX (API):** Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.
- TERMINAL INDEX (TI):** Evaluates sires for use on mature Angus cows with all offspring put on feed and sold grade and yield.

For more detailed information about EPDs and \$ indexes, visit: www.simmental.org

GATEWAY *Focus and Brand*

Gateway has been focused on making a black and red, balanced, maternal option for ranchers since around 1989. In the past, the evaluation tools were not where they are today. With the advent of the multiple breed evaluation from IGS, genomic testing, and now Right Mate and Right Choice, the idea of a **documented superior hybrid** animal is coming to fruition. In the thirty some years we have been working on this vision, it is really growing roots. Early on the vision was clear, but the database and tools were unavailable.

In 2001, before the name Sim Angus was coined by the Simmental association, Gateway named our hybrid program, Lucky Cross. A very smart businessman from Canada stated “you can’t market hybrid cattle without a name.” Even though the name Sim Angus has been coined since, we have stuck with our proprietary ranch hybrid name, Lucky Cross.

Gateway maintains a large cowherd, so we can visualize the results of our program. Once a female is retained, as long as she is sound, and is pregnant to calve before April 1st, it is all about her production. This is why we don’t have seedstock female sales. If you sell your best young females, it is hard to visualize where we are going, plus we would need to embryo transplant to stay in the game. **It is imperative to know how our top genetics perform in the real world.**

I question the overuse of the statement “pounds pay.” Of course, pounds pay, that is how we get paid for our production. However, from a cow perspective, pounds pay when you salvage the cow. How much does it cost to produce her pounds of offspring through her lifetime? How many years does the cow last, and how much do we have to feed her? Furthermore, what is the value of the pounds she is producing? If you feed cattle to finish, there is nothing more depressing than selling fed cattle on a grid, then looking at the carcass data and seeing how much money you left on the table.

Typically, with continental based cattle, the normal problem is that they are not grading good enough. With straight British bred cattle, it may also be quality grading or too many yield grade 4s. Gateway has fed cattle to finish since 1994. By looking at feeding closeouts and carcass data, it gives perspective you otherwise wouldn’t have had. **Quality beef is the competitive advantage of American beef in the world market.** This is why the Lucky Cross program is pushing the envelope for marbling, while maintaining competitive yield.

Efficiency in beef production cannot be achieved without capturing some of the 25% improvement in pounds weaned per cow exposed through maternal heterosis.

When I hear cattle people comment on how some of the high marbling Angus cattle are hard doing and not so fertile, it tells me that the genetic base is too small; they lack maternal heterosis. Why can’t we make fertile, easy doing black cattle that improve productivity and add value with marbling? The cow is half the equation. The better the cow, the less the need for terminal sires. The more opportunities you have when marketing your calf crop. The cattle business is a long-term proposition. **If we are diligent, we can cut production costs and add real value at the same time.** It requires selection and the tools and science available.

Isn’t the commercial herd inbred enough? As an industry, we need more diversity. It is hard to capture both direct and maternal heterosis in a sustainable way without incorporating multiple breeds into hybrid cattle. We have experimented with different breeds and hybrids, but it seems adding Red Angus to the Simmental and Black Angus fits our Lucky Cross model the best.

“ This may seem complicated and crazy to some, but progress is made by thinking outside the box, and implementing proven new tools as they become available. ”

Why consider the Gateway LUCKY CROSS™ Program?

LONG TERM APPROACH:

- Our family operation strives to sustain itself over generations. The fourth generation is currently stepping in, and the fifth generation is coming.
- We have a long term vision, not just focused on the next sale or the next hot bull.

BULLS ARE ALL RAISED ON THE SAME RANCH:

- No cooperators or outside consignors
- Big sire groups

MORE HETEROSIS, BROADER GENETIC BASE:

- Lucky Cross parameters are 3/8 to 5/8 Simmental with a focus on broadening the base for the balance. Sustainable crossbreeding.
- Forget about politics and make them good: Let the data and science speak for itself.

MATERNAL OUTCROSS OPTION TO COMPLEMENT THE PUREBRED ANGUS COW:

- Someone needs to do it. Lots of maternal cattle have been over selected for growth, without the benefits of considering maternal heterosis.
- We focus on maternal shape with proven genetics that are genetically maternal.
- We don't question the science, we make the figures match the claim.

PUSHING THE ENVELOPE FOR MARBLING:

- Make the pounds we produce worth more.

We have been building a maternal hybrid for improved marbling with an eye on limiting the percentage of Black Angus for a long time. GW Lucky Charm 665K, born in 2000, was the founding sire of Lucky Cross. Although it is thought that both Red Angus and Black Angus are highly related, Dr. Mahdi Saatchi, a world renown geneticist, who also created Right Mate and Right Choice, has stated that when he looks at the genome between Black and Red Angus, **Red Angus is a minimum of 80% unrelated to Black Angus.** Mahdi gave us confidence that working Red Angus into our Lucky Cross program was a good idea. We will still offer many Simmental Black Angus pedigrees, but we need to protect ourselves from making inbred hybrid cattle.

Some of the black sires we are using that carry Red Angus blood are 5L Advantage, GW Sparky 369, GW Deadwood 079, and GW Warhead. Some of the bulls that sell with these pedigrees will be homozygous black. Most cows in this part of the world carry both black genes anyway. Over time, we will create more homozygous black cattle with a more diverse gene makeup.

Heterosis and breed complementary are the only things free in the cattle business. That is why we have been diligently developing an "intermediate breed choice", Lucky Cross. When I say "intermediate breed choice", I mean a combination of British and Continental breeding. "Whichever direction you are going, they cross" is used to signify multi trait balance. Many of us know, trends change and can move animals out of equilibrium. Catch the middle ground whether you are coming or going.

In the South, there are many Brahman influenced hybrids that add value in the production traits, especially for their heat tolerance. (Brangus, Santa Gertrudis, etc.) The by line, Why not improve production traits in the North in a similar way with a Simmental based hybrid to improve red meat yield, durability and longevity? There is a need for both. The science says hybrids are more predictable than purebreds. The more divergent the genetic makeup of the animal, the less the probability of defects and matching bad genes that both the sire and dam possess. With a lack of labor, the cost of machinery, etc., producers should consider intermediate hybrid bulls that enable them to capitalize on heterosis without a complicated management system.

The term "black" implying good is overused today because a lion share of the cattle above the Mason Dixon line are black. If they are portrayed as Angus on Angus, does that make them better? What Angus on What Angus! What maternal traits? What terminal traits?

This is why the **creation of Right Mate and Right Choice** are game changers in the genetics business today. A famous phrase is, "You can't improve what you can't measure." Right Mate and Right Choice further define "black cattle". Most importantly, the programs find impactful genes you can't see, and provide an easy system to eliminate or "stack" the selected high impact genes. What am I really buying? Is the animal bred to be maternal and balanced, calving ease, or terminal?

Producers should be most excited about purchasing bulls that have been run through the Right Choice Program. By sorting the genome for impactful genes, you can avoid adding any known genes that will negatively impact the goals of your program. Over time, with disciplined selection, your cattle will become more uniform and just better. Some of the impact genes I know of that can be selected for or against are longer growth patterns, fertility genes, and post weaning gain to name a few. In general terms, if an animal tests (G+) you are assured the bull doesn't have genes that are detrimental to overall improvement in terms of convenience and maternal traits. Furthermore, if you are wanting to push the envelope on growth, but want to retain heifers, use growthy bulls that are G+. ATM bulls are more genetically suitable as terminal sires.

Whichever direction you are going,
they cross.

Great Timing for Better Tools

The tools are here today to select better bulls to make your cattle more productive and enjoyable. These tools also make it much easier to target the kind of bulls you buy, with progress being more certain in the traits you target. Because of the improvement in genomics and the advent of Right Choice, commercial producers can buy bulls more clearly defined as maternal, terminal or combination. With G+, ATM and ACE, it is much easier to identify which bulls will take you in the direction you desire.

This will be particularly important in this bull season. With liquidation, there is always potential for higher calf prices, and one must think about how to rebuild the cowherd in the future. Being able to identify bulls that provide genetics for maternal improvement, G+ and ACE, will be helpful if you plan on growing back with your current cowherd. Right choice makes it much easier to find bulls that we know have certain gene combinations to insure progress from a maternal perspective.

Managing The Genetic Condition Developmental Duplication - DD

A new genetic condition, Developmental Duplication (DD) has been identified. When the gene associated with this condition is paired in a mating the results are either 1) no visual sign 2) calves can be born with multiple limbs (polymelia).

The difference between this defect and the others such as AM, NH, and OS, is that not all of the affected calves show any visible or functional signs of any condition. This is blamed on a phenomenon called incomplete penetrance. When animals have the genotype and do not display the phenotype, this is referred to as incomplete penetrance. The cause of incomplete penetrance in DD is unknown but is being researched aggressively.

If you buy a Gateway bull that is DDC and can prove he sired a multi-limbed calf, Gateway will buy the animal at the market price you receive for the rest of your calves. We are confident with this policy as we are seeing very little occurrence of these multi-limbed calves.

There are a number of bulls selling that carry the DD gene and will be identified in the catalog. You will be able to see the herd sires that carry the DD gene underneath the sire's footnote in the herd bull section. If you have retained heifers from sons of these bulls in the past or plan on retaining heifers from the bulls you purchase, you may want to only buy DDF bulls.

With there being more genetic defects popping up all the time, it looks more realistic to manage these conditions rather than trying to eliminate all these conditions from your herd. There is no need to throw away good genetics in your herd when you can just manage them in the future.

15 FALL CALVING *Cows*

UPDATED INFORMATION AVAILABLE ON SALE DAY

We are offering approximately 15 fall bred, young cows at the end of the bull sale this year. They will be coming 3, 4 and 5 year olds. They will be bred to GW High Ball 102H with pasture exposure beginning November 12th. We will ultrasound them around Jan 20th and have their breeding dates available then. We will try to work delivery of these cows around bull delivery, and make the delivery cost as reasonable as possible. Below is a list of their registration numbers.

- 3869136
- 3869152
- 3876938

- 3877107
- 3875022
- 3877043
- 3549277
- 3548808

Bred *Heifers*

We also want to make sure our customers know we sell bred heifers in volume in the fall. They are AI bred in late May and June to Gateway calving ease sires, with the pasture bred heifers bred to wrap up by the end of April. We estimate there will be around 400 to sell. They are available private treaty on a first come, first serve basis.

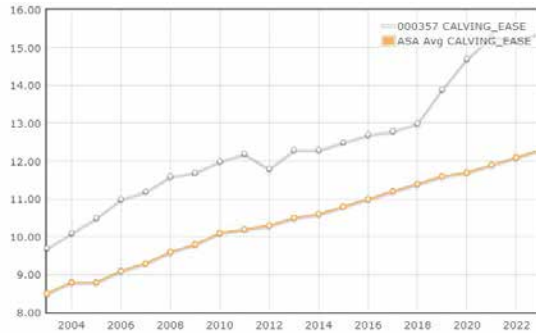

Gateway Lucky Cross™ versus Hybrid Simmental

GW Sparky is the ultimate sire for moderate, easy doing, high capacity cattle. We really like the shape of his progeny and they make beautiful cows. He is our go-to calving ease sire as well, in fact he is a perfect calving ease bull - keep all the heifers because they are gentle and moderate. His EPD profile fits the bill for producing smaller framed, low input, efficient cows. Top 25% for 6 traits. 26 carcass records. 27 sons sell

Buying The Right Bull For Your Program Using Simmental Breed Indexes

The best way to be a satisfied customer is buying the right bull for your needs and buying him at the right price. The two indexes we use for Simmental are the API (maternal index) and the TI (terminal index). All of the major meat producing species utilize selection indexes, whether it be poultry, swine or cattle. Ask any geneticist and they will tell you the best way to make progress breeding cattle is through the use of indexes.

The breeding indexes make sense because they assign monetary values to the measured traits and give value differences based in dollars and cents basis. The indexes are also very user friendly, and work well as a benchmarking tool to follow from year to year, or herd to herd.

The first step when looking at the index values is to understand what they mean and how to use them. For example, if you are going to sell all your calves at weaning, there really is no need to worry about the API (maternal index); you should focus on the TI (terminal index). If you are a producer who plans on retaining heifers to keep or market females as replacement heifers, you should focus on the API. By doing this, you and your customers will be producing females that are more genetically superior for maternal traits. If you are one that retains a percentage of your heifers for replacements and sell say 75% of calves as feeders, it would be best to put emphasis on both indexes and weight them to fit your goals.

Indexes are also very useful as a general selection tool to use when you are looking to improve individual traits. We suggest that you use the individual EPDs to tweak the traits you want to improve. For example, if a feeder buys your calves and makes a comment that they would like to see your calves have more ribeye, or more marbling, or more growth, etc., find high indexing bulls that excel in those particular traits.

There are a wide variety of genetics that have similar index values. You will be the happiest with your purchases over time, if to you select the most profitable bulls you can afford, while at the same time improving weaknesses in your cattle through the use of the individual EPDs.

BALANCE THE SCALES

BREED EFFECTS FOR COW MATURE WEIGHT (MWT)^{abc}

Angus	0
Charolais	-20 lb.
Hereford	-39 lb.
Simmental	-74 lb.

Big cows come with big feed bills.

That's why smart genetic selection pays off in the cow herd. Simmental-influenced cows are an average **74 lb. lighter** at maturity than Angus-sired counterparts, according to a recent U.S. Meat Animal Research Center study.^{a,d}

While Simmental is sized for more efficient gains, 20-year genetic trend lines also show the breed offers reliable calving ease, early growth and cow longevity.

That's a balanced herd built for profit.

^aUSMARC, Zimmerman, M., et al., "Breed and heterotic effects for mature weight in beef cattle," *J. of Anim. Sci.*, Vol. 99, 2021. ^bAdjusted for sire sampling, Angus was the heaviest at maturity among the 16 breeds evaluated. Solutions are deviations from Angus. ^cYW EPDs were extracted from genetic evaluations conducted in 2019. ^dEstimate of MWT differences at 6 years of age.

^eThe study considered 108,857 weight records from 5,156 crossbred cows sired by 787 bulls.
