A Note on Bull Development

Welcome to Cunningham Livestock! We're excited to host the New Day Genetics Bull sale and have the opportunity to develop this exceptional set of bulls.

Our development strategy with these bulls has been pretty simple. Make sure they have plenty of forage to graze, the right level of a balanced supplement to ensure proper growth and development, and plenty of room for exercise and conditioning. Essentially, our goal has been to develop them so that they can go right to work breeding cows for you, for many seasons.

Our pastures are dominated by fescue and we rely on rotational grazing and strip grazing extensively to get the most production and utilization from our forage resource. This winter, the bulls were strip grazed on stockpiled fescue behind a single poly wire until late February. They're dead broke to electric fence, and know how to graze.

I would welcome an opportunity to show you the bulls before the sale or visit anytime about their development.

Thanks and see you at the Sale!

The Cunninghams - Ted, Ashlee, Ray, John, and Paige

Welcome to the sale...

SALE LOCATION

Cunningham Livestock
1407 County Road 6380
Salem, MO 65560

We urge you to be very careful with the address, as many GPS directions are not correct. GPS coordinates 37.560546, -91.59553

Directions from Salem, MO:

NOTE: If coming from the north, we recommend using Hwy 72 from Rolla to Salem.

From the intersection of Hwy 32 and Hwy 19, take Hwy 19 south 4.6 miles to Hwy K. Turn Right on Hwy K and continue 3 miles to County Road 6380. Look for signs. Turn Right on County Road 6380, go 1.4 miles to farm entrance.

TERMS AND CONDITIONS

All animals will be sold in accordance with suggested guidelines of the American Simmental Association and the American Angus Association.

ANNOUNCEMENTS

Announcements made sale day take precedence over printed material in the catalog or other printed material associated with the sale.

LIABILITY

Owners, their agents, sale management, or any of the sales staff will not be held responsible for any policy.

SALE MANAGEMENT

REGISTRATION & UPDATED EPDs

All cattle will be registered with the American Simmental Association. Please note EPDs may change from the time the sale book is printed until the registration papers are transferred. EPDs printed in the catalog were pulled from IGS on September 6, 2024.

LIVESTOCK INSURANCE

Livestock mortality insurance can be arranged between buyer and an agent. Ask New Day staff or sale partners if you need help obtaining insurance and someone will be happy to assist you.

VOLUME DISCOUNTS

3% discount on purchase of 3 bulls
4% discount on purchase of 4 bulls
5% discount on purchase of 5 bulls
6% discount on purchase of 6 bulls
7% discount on purchase of 7 bulls
8% discount on purchase of 8 bulls
9% discount on purchase of 9 bulls
10% discount on purchase of 10 or more bulls

SEMEN INTEREST

New Day Genetics sellers are retaining one-third semen interest in all bulls sold unless otherwise noted. The buyer will receive full possession, full salvage value and two-thirds semen interest. The retained interest is a royalty interest that only comes into play if the bull is marketed through major semen companies.

NEW DAY BULL GUARANTEE

Unless otherwise noted, all bulls have passed a breeding soundness exam prior to the sale. **For all bulls selling for over \$2,500 dollars bulls will sell with a two season 90-day guarantee.** After the completion of the first 90-day breeding season, the warranty will be prorated by 50% of the purchase price. For example, if a \$3,000 dollar bull gets injured before the second breeding season the purchaser will receive a \$1,500 dollar sale credit.

Our standard guarantee for the bulls includes fertility for the first two breeding seasons and sight unseen purchase satisfaction. All other situations that are beyond our control (i.e., Injury, Death, Lameness, etc.) will be handled with integrity on a case-by-case basis. We understand the investment you make in your bulls can be significant; we will make every effort to take care of you if something goes awry. Please contact Corey or Ted with issues. **All warranties are issued as sale credit.**

Welcome...

Welcome to the 2024 Fall New Day Bull & Female Sale. We hope you and your operation has benefited from a wonderful summer filled with moisture and record calf prices. We would first like to THANK YOU for your support and interest in the New Day program.

The 2024 edition of the New Day Sale will feature one of largest offering of genetics to date. As always, the bulls are developed in large traps and all come in an 18-month-old package. We are excited to offer a high-quality set of replacement females from Mershon Cattle Company and Heart 11 Ranch of Oklahoma. Be sure to check for videos and updates on the female lots the week of the sale. The bull offering has been through intensive selection and culling processes since arriving at the bull development last fall. Along with performance testing, the bulls have been carefully evaluated for docility and foot quality. From cover to cover we are confident you will find bulls who meet your specs and are destined to improve commercial customer's bottom line.

We are committed to not only providing producers with the best genetics possible, but want to provide buyers with service as well. We have special New Day feeder cattle sales and have marketed several loads of New Day sired calves on the video. If you are looking for a venue to market your New Day sired feeder calves, please reach out to on of our team members we would love to assist you. Likewise, if you have a New Day sired set of bred heifers and would like them to be featured in our sale please reach out.

We hope you can make plans to join us on October 12 in Salem, MO. If you have any questions or concerns about the sale please reach out to Ted or Corey.

Sincerely,
The New Day Team

DELIVERY POLICY

New Day is committed to customer service and offers free delivery within 150 miles of our sale facility. New Day will also give a \$100 dollar sale credit for those bulls hauled home the day of the sale.

FREE DELIVERY WITHIN 150 MILES - \$100 CREDIT FOR BULLS PICKED UP ON SALE DAY

SELECTING FOR EFFICIENCY AND REDUCED COST

The stakeholders of the US beef business have selected for output traits over the past 50+ years and have been extremely successful in this effort. The quantity of beef produced, both per animal and per acre has grown to a level unmatched in the world as a result of genetic and management improvements. However, as we reach output trait thresholds that are increasingly difficult to top without unwanted consequences, we are compelled to more intensively consider opportunities that focus on the cost or input side of the profit equation. Research over 20 years ago demonstrated that a 10% improvement in gain results in an 18% improvement in profit, whereas a 10% improvement in efficiency resulted in a 43% improvement in profit.

If you're in the cattle business today, you understand that the cost of feed and pasture is probably not going to get "cheap" again, and certainly recognize the impact these input costs have on your bottom-line. Fortunately, technology for measuring individual animal intake and efficiency has advanced and is considerably more affordable and simpler to use than just a few years ago.

Improving feed efficiency, much like other traits, is relatively straightforward. Research indicates feed efficiency is a moderately heritable trait, and thus, selecting genetics that are more efficient will pass on to the next generation. The key is finding seedstock partners, like New Day Genetics, that are embracing this opportunity to identify efficient genetics, and ultimately have those genetics generate value for their customers and the industry.

Selecting for efficiency doesn't mean you have to give up growth, carcass merit, or maternal values. The goal is to find the cattle that continue to excel in performance, but simply are able to do so with a lower feed or forage requirement.

Feed Conversion Ratio (FCR)

This is a very easy to understand efficiency measurement that tells you how much feed (lbs of dry matter) were required for a pound of gain. Cattle that excel in FCR tend to also excel for growth traits, and can lower your cost of gain significantly. As a note, selection for cattle solely based on FCR, can indirectly increase growth, but also mature cow size. In this catalog, FCR is shown as a ratio of the contemporary test group. This means a bull that ratios 100 is average, a bull with a 110 converted feed 10% more efficiently than his peers, and a bull that has a 90 converted 10% less efficiently.

Residual Feed Intake (RFI)

RFI is a bit trickier to understand, but is very useful as an efficiency measurement. RFI is the difference between an animal's actual intake and its expected intake based on the animal's gain, body weight and composition. Essentially, RFI evaluates how much feed should be required for an animal of a given size and level of performance. Cattle that eat "less" than expected will have a negative RFI, which is desirable. RFI is more closely linked with biological efficiency, and is independent of growth and mature size. For ranches that select low RFI genetics, resulting replacement females will require less feed to maintain, and long term can potentially increase stocking rate. Ranches that also retain ownership of calves will likely want to couple this selection with growth and performance traits to ensure feedyard performance meets expectations.

Greater Genomic ASSURANCE

Access to more and better information has always been key to making wise decisions. The evolution and improvement of genetic evaluation tools too has given us an ever-clearer picture of the true genetic makeup of cattle and thus a better view of the value proposition. RightMate, powered by Top Genomics LLC is taking the evaluation of genetics and genomics one giant step further. By combining specific genomic information with the long-proven value of EPDs, this new advancement in technology improves our depth and precision when evaluating the actual ability to transmit value and profit.

The 3 Accreditation Logos below are designed to simplify bull selection and improve buyer confidence by more accurately describing the genetics offered and by reducing risk. What this means to you as a customer is a much greater assurance that you are getting both what you want and need from the genetics you purchase. What it means to your seedstock provider is access to RightMate technology that simply sets them apart from the rest of the industry.

ACCREDITED GENOMIC PLUS – For the majority of producers who simply need consistent and balanced genetic improvement, without genomic setbacks, G+ Accredited bulls should be on your list for premium purchase. These sires will absolutely move you forward

for both cost reduction and income producing traits and substantially reduce risk when compared to all other evaluation programs. It's simple, the right genes are in these bulls to help secure a profitable future and the they have great EPDs to match!

ACCREDITED TERMINAL MATE – Just like an ATM machine makes it simpler to access your cash, the ATM Logo highlights bulls accredited to generate extra cash income as soon as your next calf crop! These bulls are meant specifically to use only on mature cows and for the purpose of adding performance, pay weight and end product value to market.

ACCREDITED CALVING EASE – Simply find bulls with the ACE logo for third party Accredited, secure Calving Ease bulls. Though we have had tools in the past to assist in choosing heifer bulls, we've never had one nearly this effective. The reduced risk that comes with this

genomic certification will simply make your decisions easier and your heifer calving season more successful. Purchase special purpose ACE bulls with confidence. They will deliver consistent and predictable calving ease.

REDUCE RISK WITH AGE ADVANTAGED BULLS

There are several important and logical reasons why commercial customers should consider purchasing bulls with a few more months of age and development on their side. Some of the benefits are obvious, but some others we don't always consider.

- Older bulls have the ability to service more females in a shorter period of time than yearling bulls. Age advantaged, 18-20 month old bulls should be capable of safely settling at least 5-10 more females in their first breeding season with minimal risk over a 45 day breeding period due to greater fitness, superior average semen production and maturity.
- Over-fat bulls are an issue in this industry. A high quality, slower paced development program is possible when producing older bulls for sale. Age advantaged bulls can simply be developed more slowly and still reach target weights and marketable condition with ease. Too often bulls developed to be sold as yearlings are subjected to extra push nutritionally in order to make those same thresholds. When done improperly, the results can be reduced longevity and lifetime service because of damage to feet, soft skeletal tissues and in extreme cases even internal organs associated with excess or faulty nutrition and exaggerated growth rate.
- Certainly, older bulls lose less weight and strength during their first breeding seasons. With that in mind the risk of your bull taking a week off or quitting the process of breeding cows completely is reduced. This is especially true in the more challenging breeding environments of the southern US.
- More of the guess work is taken out when purchasing older bulls. Strengths and flaws can both be more evident to buyers with an extra 6 months of development. For example, by that age foot and leg or disposition issues will be more evident and a higher percentage of potential problem bulls should have been identified and removed from the offering.
- Sorting older bulls does not give license to buy poorer genetics just because they have more age. It is important to make sure the age advantaged bulls you are evaluating are not just the leftovers after the more valuable bulls were not marketed as yearlings and low genetic value bulls should never be an option, regardless of age.

Many producers will always favor purchasing high value, younger bulls because of the potential of an extra season of use later in life and often sellers prefer the simplicity and lower cost of producing them. Correctly developed older bulls however, simply have a greater probability of breeding success in the first season than when they were younger. Give them a try for reduced risk.

DOCILITY RATING

All bull lots have a Docility Rating. This is our own evaluation of the bulls and not based on their EPDs. Both measurements should be considered when making a buying decision. The bulls are ranked 1-3. Anything worse than a 3 (4-6) has been culled. The definitions are as follows:

- 1 **Docile - Gentle and easily handled**
- 2 **Restless - Quieter than average, but can be stubborn**
- 3 **Nervous - Manageable, but may require a different level of management and respect when handling**

NEW DAY DEVELOPMENT PROCESS

We believe our development process is one that allows for the bulls to properly develop and tests the bulls to the challenges Missouri cattlemen deal with day in and day out. All of the bulls in this sale arrived at Cunningham Livestock late spring/early summer 2022. The bulls are then commingled in large groups based on weight and frame. After commingling the bulls are then developed in large pasture settings with fescue or stock piled fescue as the primary forage. The bulls are supplemented with minimal harvested feedstuffs and if the bulls are not performing up to par are culled. We are confident our age advantage, forage developed bulls will hold up in large pasture settings in the fescue belt.

BEACH CATTLE COMPANY is owned by Matt and Noelle Beach of Leonard, MO. Matt marks the fifth generation of his family to be involved in the farming and livestock industry. Diversity is key at Beach Cattle Company as along with a robust herd of registered cows, the operation features a hog operation, row crops and a seed business. Matt also manages Vortex Seed Company a large seed company serving Missouri farmers for numerous years. The growing cattle operation utilizes intensive selection for AI and the program has a growing embryo transfer component. Look for the BCC prefix at both the Spring and Fall New Day Sale for years to come.

LUDWIG SIMMENTALS The Ludwig family has been raising cattle and crops since the late 1800s near Jackson, MO. The Ludwig family was early to adopt the use of Simmental Cattle as the first Simmental cattle arrived in the early 80s. Following the arrival of the first Simmental cattle Randy began an intensive AI selection and were one of the first to adopt black Simmentals in the state of Missouri. The program incorporates genomics, RightMate, collaborative research with the University of Missouri, and a magnitude of data in their selection process. Look for the LUD prefix in both the Spring and Fall New Day sales.

PRAIRIE VIEW FARMS Greg & Sue Drebes of Monroe City have been longtime cattle and row crop producers. Greg has spent a lifetime in assembling one of the strongest and long-standing Simmental herds in the Midwest. Success and quality are associated with the PVF prefix in the Simmental business. Greg has marketed countless Simmental & SimAngus bulls to producers all over the Midwest while seeing a magnitude success in the showing. Buy the PVF prefixed bulls with confidence from a longtime New Day genetic provider.

Lot 132 MERSHON CATTLE LLC - 45 HEAD OF ANGUS BASED SPRING CALVING BRED HEIFERS

- Females were AI Bred to Sydgen Enhance, the #1 bull for Angus registrations in 2020 and 2021, and cleaned up with Angus bulls. Will begin calving March 1. Along with receiving two rounds of BRD vaccines and two rounds of pinkeye vaccine, the females were pelvic measured on 4/14.
- Mershon Cattle markets a magnitude of bred females throughout the state and the genetic makeup of the females come through Sydenstricker (Angus), Gibbs Farm (SimAngus), and New Day Genetics (SimAngus).
- Look for videos of the females the week of the sale. We will sort the females in small groups based on fetal sex, calving date, and type.

Lot 133

HEART 11 RANCH - 45 HEAD OF BLACK & BWF SIMANGUS SPRING CALVING BRED HEIFERS

- Females were AI Bred using TJ Night Owl and GW Medicine Man and cleaned up using low birthweight SimAngus bulls from T Heart Ranch. Females have received all their shots and were sorted from a group of nearly 600 head. Females will begin calving 1/24.
- Heart 11 markets thousands of females through Oklahoma and Colorado. The genetic makeup of the females comes from T Heart Ranch and New Day Genetics.
- Look for videos of the females the week of the sale. We will sort the females in small groups based on fetal sex, calving date, and type.

GAIN AN EXTRA SHOT OF HETEROSIS WITH A NEW DAY BULL

Years of research and industry proofs stand unchallenged. Crossbred calves simply weigh more and crossbred commercial cows are absolutely more productive and profitable than straightbred commercial cows. End of story! In fact, the economic advantages are so large, one could argue that anyone discouraging commercial herds from using planned crossbreeding is just not interested in their profits or sustainability.

Historically, the promotion of crossbreeding has focused on the simple direct effects of individual heterosis. This is because those improvements are immediate, easy to see and impressive, often resulting in increased weaning weights of 4 to 5%. That translates in a 15 to 35 more pounds of calf weaned next year compared to this year, just with your first cross on straightbred cows. Far greater economic impacts of crossbreeding however are realized in the added profit produced by crossbred commercial cowherds designed with a plan for profit. "Plan" is the key. Just like in all facets of the commercial cow calf business, poor decisions in crossbreeding programs for breed, source or individuals are not acceptable, especially today with better information available and more value at stake.

So, how much more valuable is a crossbred commercial female vs. one that is not? Research repeatedly shows a lifetime production increase for crossbred females of between 20 to 25% because of greater fertility, longevity and improved maternal environment. Hundreds of publications have demonstrated this advantage dating back to the 70's and there is literally no research that dispute these results. Simply put, if an average straight-bred female produces six, 500 pound calves in her life, the result is about 3000 lbs. of gross production. In comparison, based on years of data and research, her crossbred counterpart will deliver between 3600 and 3750 pounds of calf weaned because on the average she produces an extra calf in her lifetime and each calf is heavier. Depending on price, that added performance generates somewhere at or above \$1000 more total dollars of value or more than \$100 per year of added income. The benefit of needing to retain 10-15% less replacement heifers each year and calve substantially fewer 2-year-olds each season is a huge bonus as well.

I realize that the previous example is based on maximum heterosis which is achievable through advanced management or systems approaches, but can be challenging to maintain for some operations. For greatest simplicity and practicality, consider composited seedstock with the breeds and percentages that fit your production and marketing situation. They come with retained heterosis and profit enhancement bred in. Even at 50-75% of the maximum possible heterosis, the increased profit composites provide is difficult to match by any other enterprise change and the long-term improved uniformity of both calf crop and cow herd makes everything you do easier.

EFFECT OF SIRE BREED ON SALE PRICE OF BEEF STEER CALVES

Superior Livestock Auction, Summer 2020^c

SimAngus™-sired steer calves sold through Superior Livestock Auction in summer 2020 earned **more at sale time** than all other calves.^{ab}

It's no wonder the percentage of **SimAngus™** calves marketed through the industry's largest video auction has grown **eightfold** since 2010.

Want low-risk, high-potential calves with earning potential?

STAND STRONG SIMMENTAL

406-587-4531 • simmental.org

^a For lots of 50 head or more. ^b Kansas State University, December 2020, Superior Livestock Auction data analysis of 3,280 lots, 394,900 head of beef calves marketed during summer 2020. (P<.0001)

^c Lots that qualified for breed-related programs were excluded from the model due to potential confounding effects with sire breed analysis and, for many, few lots in the data.

^{d, e, f} Means without a common superscript differ (P<.05). Lots of calves in breed-identified groups were sired by bulls from the respective breeds and out of dams with no Brahman influence.
