

Reflected R Ranch

RR

Complete Female Dispersal

TUESDAY, DECEMBER 1, 2026

12:00 NOON MT at the Crowley County Fairgrounds, Ordway, CO

Welcome.

Welcome to Southeast Colorado and Reflected R Ranch. December 1, 2026, marks a major milestone in our lives, as we disperse the complete cowherd we have built during the past 34 years. Make no mistake, this is a complete dispersal of every registered cow we own. When the sale is over, we will still own a pen of weaned bull calves to market and six fall-born embryo bull calves and their commercial recip dams. That's it. Not a mature cow dispersal. Not a sale of everything except a "few" cows or heifers. No tankful of embryos for a rebuild. A complete registered female dispersal. You have the opportunity to choose from the entire cowherd, bred heifers and heifer calves.

As we planned this sale, we have been asked repeatedly why we are dispersing. The answer isn't simple and isn't simply one factor. When we moved to Colorado in 1991, it looked like the Garden of Eden, with above average rainfall nearly every year through the 1990s. Oldtimers told us not to get used to it, that it would change, and when it did, it made up for lost time. For the past 25 years, since 2001, Southeast Colorado, and the Southwest U.S. in general, has been in near continuous drought. In 2002, it was so dry the entire year, that not even the road ditches turned green. We sold some cows, shipped some to Kansas for the summer, thanks to the generosity of Susan's parents, and fed others through the summer. We got through that year and had a few "average" years and built numbers back up, then in 2012 it happened again. We sold the cowherd down again, but when that episode was over, we decided to keep the herd at a smaller size and run grass yearlings when the climate allowed. In the ensuing years, we have only had grass to run yearlings a handful of times. Recently, even with reduced cow numbers and careful stewardship of our grass resources, we have had to feed more and more. So, reason number one for dispersing? Drought.

Secondly, as we've gotten older, the appeal of calving heifers in February isn't nearly as high as it was in our 30s. And third, our two sons, Jason and Chad, have their own careers and have minimal interest in returning to the place where they have seen us struggle with the harsh climate.

That's a long-winded way of saying that you are getting the product of a cowherd that has had the bottom end sold off twice in a major way. If you want to make your herd better, I can guarantee that cutting off the bottom third of it will do wonders.

We're not getting out of the cattle business, just changing direction to one with more climatic versatility. We'll run grass yearlings or perhaps develop commercial replacement heifers when it rains and do less when it's dry.

So, take advantage of the intense pressure we have put on our cows to survive and thrive in a really tough environment and use them to build your own herd, or bring in some genetics that can help your customers build a more resilient cowherd.

Lodging.

There are several motels in La Junta, CO, located about 30 minutes away. They include EcoLodge, Holiday Inn Express, Hampton Inn, La Junta Inn and Stagecoach Motel.

Livestock Transportation.

Curt and Sale Management are happy to assist in arranging trucking after the sale.

Herd Health.

Please see page 61 for our complete herd health program.

Terms of Sale.

Terms of sale are cash or check to be paid in full at the conclusion of the sale. All sales are final. Cattle sell under the standard terms and conditions of the American Simmental Association for a dispersal sale. Pregnancy status was confirmed by a licensed veterinarian on September 30, 2026. All breeding information is provided to the best of our knowledge, and no guarantees are made on pregnancy status. The recipient cows carrying pregnancies that sell for $5,000 or more are guaranteed to be carrying the mating stated in the catalog. If the resulting calf does not DNA parent verify to the mating a $1,000 refund will be applied.

Hospitality.

Please join us for a complimentary lunch on sale day.

Sale Management.

From the Sale Manager

ALLIED GENETIC RESOURCES

Welcome to the Reflected R Ranch Complete Female Dispersal sale. We are excited to have the opportunity to assist Curt and Susan market what has been three and a half decades of passion for the Simmental and Seedstock business. When you look through this sale book and see the cattle in person, I hope you are as impressed as I am with the offering. These females have made a living in the harsh, short grass country, of Southeastern Colorado. They must travel to forage and go to water, so I challenge you to find a herd that is as sound structured and good footed as these females are top to bottom in this offering. The cows are the right size to offer all the performance needed for the industry today but still moderate framed enough to be efficient, and breed back in a limited feed environment. These females are not just impressive to look at visually, when you study the data, they are backed by some of the top bulls in the breed and have an impressive EPD profile.

In this offering you will find an impressive set of bred heifers as well as the cow herd that is backed by 35 years of intense genetic selection. The cows are cataloged by age, youngest to oldest. If they raised a heifer calf this year, the calf is lotted with the cow as an A lot so you can see what she produced. The cows and calves will be penned this way at sale time as well. If a cow does not have an A lot calf listed, it is likely she had a bull calf. Next in the catalog are 17 open heifer calves. These calves are individuals because their mothers did not make the cut for the sale for number of reasons like age or pregnancy status. Next are three elite herd bulls. These bulls are very elite and have a lot to offer for the new program they will go to work in. Then we conclude with the pregnancies. These are in a very functional set of commercial females that have a good udder and sound feet.

Opportunities to purchase females like this only come along in a complete dispersal. If you are in wanting or needing to add females to move your program forward this is the chance.

If you have questions, please reach out to any one of us on the Allied team. We will be happy to assist.

Sincerely,
Marty Ropp, Corey Wilkins and Jared Murnin

Long before "data centers" became a hot topic for politicians and newscasters, seedstock producers have been harvesting data of all sorts on their cattle. And Simmental was the first of the beef cattle breeds to really embrace the collection and analysis of data to improve the herds.

That continues to this day. Reflected R Ranch has embraced many of the programs developed by the association to further our knowledge of our cattle and their end product. We have utilized programs like Cowherd Roundup to DNA test every registered cow in the herd. Complete Calf Crop Genomics has been used to genomically evaluate every registered calf born at RRR. We have invested in eight herdbulls to enroll in the Carcass Merit Program and evaluate those sire's genetics for feedlot performance and carcass quality and yield. Our embrace of data collection and recording has resulted in Reflected R Ranch being recognized by the American Simmental Association as a Performance Advocate.

So every registered animal sold today has had its parentage verified through DNA analysis and their EPDs have been calculated using their genomic merit to enhance their pedigree and actual performance data.

Since joining the R.A. Brown Ranch team in 2020, we have also used a third-party genetic analysis known as $Profit to learn even more about our cattle. $Profit is another tool that producers can use to refine their selections of seedstock. We did not print the $Profit information in the catalog to avoid making it hard to read and comprehend for those unfamiliar with it. But if you want to see this additional data, please let us know. We can provide a complete profile of all the $Profit EPDs and $Indexes either electronically or we will have it available in printed form before sale day. Most of the animals in the sale will have their $Profit genetic profiles enhanced by DNA analysis as well.

Take advantage of all the tools available to make the selection of cattle to add to your herd as beneficial as possible.

THE Total Herd Enrollment

American Simmental Association PERFORMANCE ADVOCATE

GGP

Data... Data... Data...

The American Simmental Association will officially release updated All-Purpose Index ($API) and Terminal Index ($TI) values in mid-November, utilizing updated formulas to adjust for changes in economic factors. This catalog must go to print prior to the release date. While RRR's females are still the same top quality both before and after the update, there will be updated $Indexes available by sale time. Please look for a sale-day supplement.

Our Story.

We started our Simmental cowherd in the early 1990s while Susan and I were both working other jobs. We were both raised on livestock and grain operations in Kansas, in Susan's case on a registered Hereford operation. When we were ready to move into the beef seedstock business, we consulted her Dad, who recommended we look at "those black Simmental they are starting to make." The base of our cowherd came from the late Bob Dickenson at Gorham, KS. When most breeders were trying to make frame score 10 cows, Bob kept his cow size moderate and used some Fleckvieh genetics to maintain muscle and volume.

We added genetics from several other breeders through the years but always kept our eye on the ball. Moderate-framed cows with muscle and middle, who milked enough to raise a healthy calf, but not so much as to cause major problems with reproduction.

We mostly sold private treaty through the early years, then worked with the Temple family on the T-Heart Ranch in Colorado's San Luis Valley for several years, marketing bulls through their annual sale. In 2020, we made the move to cooperate with the R.A. Brown Ranch in Throckmorton, TX and have sold the bulk of our bulls there ever since.

Reflected R Ranch

In between, when I was working as a regional salesman for a feed company, one of my customers was wishing to retire. We made the decision to purchase the existing feed and supply business in La Junta in 2000 and operated it for nearly 20 years, quadrupling sales and adding custom milling plus products like liquid feed supplement and services, such as semen sales and AI arm service. We sold the business to two employees in 2019 and concentrated even more on our SimGenetics cowherd.

We were both raised in families who were active in their communities and organizations. It stuck with us, as we volunteered for everything from 4-H leaders and church committees to the American Simmental Association Board of Trustees, where we both served two full terms, including stints on the Executive Board. Our two sons grew up in the Colorado and American Junior Simmental Associations. Just this past year, I had the honor of serving as President of the Colorado Cattlemen's Association and Susan has served the Colorado Simmental Association for 29 years as Secretary/Treasurer, where she does things like coordinate Simmy events at the National Western Stock Show every winter.

Thank you for your interest as we disperse the cowherd that has been a passion for both of us for the past 34 years.

- 07N combines many of the factors missing in red SimAngus today, with great CE, Marbling and $API in a docile package. Her dam, lot 101, is the gentlest cow in the herd. 07N's sire, Titus, is a Red Angus that blends great phenotype with more growth than most of his peers. He was bred and marketed in the R.A. Brown system. In October, a Titus son was the highest selling bull ever in the R.A. Brown program, at $157,000. Select Sires has just added Titus to their AI bull battery. There are 6 direct daughters plus 2 weaned heifer calves in this sale, plus 2 heifers and 1 cow carrying his service. Get a jump on one of the hottest, and more importantly, one of the most useful, red genetic lines in the beef business.

BROWN GTLS TITUS K6257 Sire of Lots 9-14.

RRR TITUS 14N Sells as Lot 10.

- Calving Ease EPD in the top 4% of the breed, while she still maintains breed average growth. This long-bodied, high-volume Tahoe daughter exemplifies the genetic type we have worked 35 years to produce. Her mating to our herdbull Rangeland improves even more the growth, carcass and indexes, while keeping CE at a heifer-safe level.

- *Pasture exposed to BROWN PRA PILOT L4850 (4213616) from 5/22-8/1. Pregnancy exam suggests safe to PE sire. Due 3/25/27.*
- Three years ago, our friends, the John Kleiboeker and Chuck Miller families were having trouble finding the high-performance red genetics to move to the next level for our herds. Then we found 225K. We purchased her as partners to use in an ET program focused on producing high genetic merit SimGenetic cattle. One look at her full EPD profile shows why we chose her. She has 11 EPDs and $Indexes in the top 10% or higher of purebred Simmental. After a slow start to embryo production, she hit her stride and has now produced a number of offspring, including two heifers in this sale and two more high profile bull prospects in the pen at home. Chuck says her Pilot son is the best bull calf they have from this spring's calf crop. She's bred back to Pilot for a March calf that projects top 10% growth and $API and top 15% for Marbling. That's a really hard to find combination in red SimGenetics.

- A full sister to Lot 53, she has a great Longmire son in the prospect bull pen back home.

Lots 53-151 are bred cows and pairs. Many are listed as pairs, with heifer calves cataloged as "A" lots. Calves have actually been weaned since mid-August, but we lotted and penned cows with their natural heifer calves, where possible, to give you an opportunity to see what those cows had produced this past year. Pairs will be split and sold separately, or at the discretion of auctioneer or sale management may be sold as choice lots. Where bull calves are mentioned in footnotes, it is simply a reference to bull calves retained to market through the R.A. Brown Ranch cooperator program or private treaty by Reflected R Ranch. You are welcome to view those bull calves at the ranch prior to sale day, but they will not be on site for the sale.

- This young red cow is carrying strong growth genetics, as evidenced by her 115 weaning ratio and 111 yearling ratio. She was bred natural service, but the bull is in question. It may be Redwing, who sells as lot 173. Or, it may be a purebred Red Angus who belongs to a neighbor who raises registered Red Angus. He jumped the fence and we found him in the pasture one day when this cow was in heat. If you DNA the calf and it doesn't come back to Redwing, then it's likely sired by Red Angus #4743961.

- Out of a cow we purchased from Clear Springs as a bred heifer, this young female's sire may give you pause, first because at the time we purchased her, Travis Wulf described him as a genetic unicorn. Although his numbers have moderated a bit in the past 4 years, they are still at a breed-leading level. The second reason to pause is his Docility EPD, which like his daughter is in the 99th percentile. We've never seen a problem with handling 52L, perhaps because of the calming influence of her maternal grandsire, Imperial. She is really nice-balanced and smooth in a deep-bodied package.

BROWN PRA PILOT L4850 Service sire of Lot 91.

- *Sells open.*
- This heifer calf has a bit of a story. In the spring of 2025 we had the 2- and 3-year-olds synchronized for AI. When we went out in the morning to start breeding early heats we found the neighbor's yearling Balancer bull in with the young cows. We got him out right away and hoped for the best, but he was a busy boy in that short period of time, getting five cows bred in less than 12 hours. Fortunately, we were able to determine by DNA all the calves he sired and this is one of three heifers. The bull had DNA with the Gelbvieh association so we have Genomic Enhanced EPDs for both him and his offspring. And they're pretty darn good and the heifer is still a half-blood Simmy.

RRR DOUBLE AGENT 07L Sells as Lot 100.

- This Eagle daughter we bought as a calf from Triangle J has been a bull producer, including the high-growth Tahoe son that sold last year for $16,000 in Throckmorton, TX.

RRR TAHOE 37P Sells as Lot 144A.

Herd Health Program

COWS PRE-CALVING

Mature cows get ScourBos 9, late December/early January.
First calf heifers ScourBos 9, early December, ScourBos 4 booster, early January

CALVES

At Birth: Feb/March – Naselgen 3PMH, C, D and Tetanus combo vaccine
At Branding: April – Naselgen, Covexin 8, Anthrax
At Weaning: August/September – BoviShield Gold One Shot, Cavalry 9, Avermectin pour-on
3-4 weeks post-weaning: Bovishield Gold 5, Wart vaccine

COWS AND BRED HEIFERS

September: CattleMaster Gold FP5, Covexin 8, Anthrax, Avermectin pour-on. Note – cows that were preg checked on September 30 did not receive pour-on until October 22, because of rain on day of processing.

HEIFER CALVES

Late September: OCV Brucellosis vaccine, EID, Wart vaccine booster

All registered female cattle have been OCV vaccinated for Brucellosis and have EIDs. All home-raised cattle have been tested for Persistently Infected BVD. We have never had an animal test positive. Pregnant recips have received the same health program but a couple do not have legible OCV tattoos. Please confirm your states rules concerning these cows.

ASA QUICK REFERENCE TO EPDS, INDEXES AND $VALUES

EXPECTED PROGENY DIFFERENCES (EPDS): EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing in what units they are expressed. For example, if the above case referred to weaning weight EPDs, sire A would be expected to sire 15 pounds more weaning weight than sire B. If calving ease was the trait, sire A would be expected to sire 15 percent more unassisted births in first-calf heifers; in other words, if sire B sired 30 assists in a group of 100 heifers, we would expect sire A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For more detailed information about EPDs and $ indexes, visit www.simmental.org.

Listed below are the units in which ASA EPDs are expressed:

ALL-PURPOSE INDEX (API): Dollars per cow exposed under an all-purpose-sire scenario. (See $ Indexes for more details.)

BACK FAT (BF): Inches of carcass backfat at 475 days.

BIRTH WEIGHT (BW): Pounds of birth weight.

CALVING EASE (CE): Percent of unassisted births when used on heifers.

CARCASS WEIGHT (CW): Pounds of carcass weight at 475 days.

STAYABILITY (STAY): Percent of daughters remaining in the cow herd at 6 years of age.

DOCILITY (DOC): Percent of offspring receiving a disposition score of 1 (docile).

MATERNAL CALVING EASE (MCE): Percent of unassisted births in first-calving daughters.

MILK (MLK): Pounds of weaning weight due to milk.

MARBLING (MARB): Carcass marbling score at 475 days.

MATERNAL WEANING WEIGHT (MWW): Pounds of weaning weight due to milk and growth.

RIBEYE AREA (REA): Square inches of carcass ribeye at 475 days.

TERMINAL INDEX (TI): Dollars per cow exposed under a terminal-sire scenario. (See TI for more details.)

WEANING WEIGHT (WW): Pounds of weaning weight.

YEARLING WEIGHT (YW): Pounds of yearling weight.

YIELD GRADE (YG): Carcass yield grade score at 475 days.

$ INDEXES: Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide pieces of the economic puzzle. This is where $ indexes come in. Through well-conceived, rigorous mathematical computation, $ indexes blend EPDs and economics to estimate an animal's overall impact on integrated commercial production. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following $ indexes:

ALL-PURPOSE INDEX (API): Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

TERMINAL INDEX (TI): Evaluates sires for use on mature Angus cows with all offspring put on feed and sold grade and yield.

USING API AND TI: First, determine which index to use; if you are keeping replacements use API, if not, use TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra $6,000 over a +50 bull if both are exposed to 30 cows over 4 years ($50 diff. x 30 hd. x 4 yr.=$6,000). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed.

For more detailed information about EPDs and $indexes, visit: www.simmental.org Important disclaimer: DO NOT compare index values of purebreds of different breeds, hybrids of different breed composition or purebreds with hybrids - our system was not developed to make valid comparison among these groups. Therefore, you must first determine the breed and breed composition appropriate for your herd and use index values to compare animals within that population.

The American Simmental Association will officially release updated All-Purpose Index ($API) and Terminal Index ($TI) values in mid-November, utilizing updated formulas to adjust for changes in economic factors. This catalog must go to print prior to the release date. While RRR's females are still the same top quality both before and after the update, there will be updated $Indexes available by sale time. Please look for a sale-day supplement.
